

Atlantean Animal Feed - Certified Organic Feed Supplement

Harvested from Irelands Atlantic coast, source of the least polluted seaweed in Europe. Beware of seaweed from highly polluted seas.

Seaweed is a totally natural multi-mineral supplement.

In contrast to conventional mineral supplements, Seaweed is unique in being of plant origin containing a wide range of naturally balanced chelated minerals, trace elements, amino acids and vitamins. Seaweed contains all the minerals and trace elements an animal requires for a normal healthy life.

SAFE AND NATURAL

Being totally natural and of vegetable origin Seaweed is easily digested and is safely fed to animals of all ages.

IMPROVED METABOLISM/STAMINA

Feeding Seaweed improves the animal's ability to digest: enabling the animal to make better use of the feed available to it.

Seaweed contains laminaran oligosaccharide which acts as elicitor for B-Glucanase.

B-Glucanase is an important immune stimulator in animals. By enhancing the effectiveness of the immune system, Seaweed increases the animal's ability to cope with stress.

FEEDING RECOMMENDATIONS

when first introducing seaweed into feeds use no more than a pinchful, gradually increasing to the recommended daily ration over 7-10 days. Do not feed ad lib.

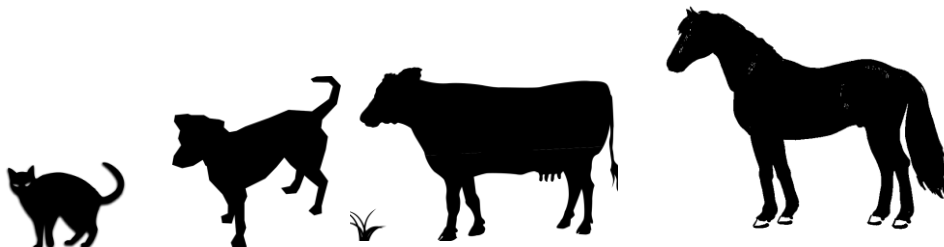

Seaweed is an extremely high quality natural mineral supplement made from freshly harvested *Ascophyllum Nodosum* grown on the remote shores of the North Atlantic.

It can truly be described as an organic product.

Seaweed is a plant and therefore easily digested by animals.

It is fed to a wide range of animals from the most expensive pedigree horses to dairy cattle, beef cattle, sheep, goats, pigs, dogs and cats.
